

JADEN FANN

(206) 979-6842 | fann@berkeley.edu | [linkedin.com/in/jadenfann/](https://www.linkedin.com/in/jadenfann/) | [Portfolio: showspace.so/s/jadenfann](https://www.showspace.so/s/jadenfann)

EDUCATION

University of California, Berkeley | M.S. Mechanical Engineering | GPA: 3.8 2024 – 2025

University of California, Berkeley | B.S. Mechanical Engineering | GPA: 3.7 2021 – 2024

Coursework: Robotic Locomotion | Mechatronics Design | Manufacturing Design | FEA + Ansys | PCB Design

SKILLS

SolidWorks | Onshape | Fusion 360 | AutoCAD | Ansys | MATLAB | Simulink | ROS | Python
FEA | GD&T | Fabrication: (FDM Printing, Lathe, Milling Machine, Drill Press, Waterjet/Laser Cutting)

WORK EXPERIENCE

Mechanical Engineer | Blue Origin September 2025 - Present

- Designing actuation mechanisms for the Blue Moon Lunar Lander MK II.

Mechanical Engineering Contractor | Engineering Solutions at Berkeley

Tesla September 2024 – January 2025

- Designed, prototyped, and tested an electromechanical two position actuating mechanism.
- Engineered and validated designs with first principles, deflection calculations, FEA, and design failure mode analysis to ensure optimal performance, reliability, and safety.
- Created design drawings and prototype concepts using CAD, GD&T for manufacturing and assembly.

Sentien Robotics January 2023 – May 2024

- Designed and prototyped a planar cable robot, including a robust winch system running at up to 3000 rpm, to reliably catch midflight automated drones landing at 20 mph.
- Validated and manufactured designs using SolidWorks, 3D printed prototypes, design analysis, to improve function and reliability. Increased winch reliability 2x through uniform winding distribution.
- Managed a cross-functional team's communication, project timeline, to ensure successful execution.

Mechanical Engineering Intern | Inductive Robotics June 2024 – September 2024

- Engineered autonomous robotic charging system prototype using Onshape, FEA to design and integrate high-voltage components, battery, robotic mechanisms, sheet metal, into a cohesive system.
- Designed parts for manufacturing, creating engineering and welding drawings for accurate service.

Mechanical Engineering Intern | Group14 Technologies May 2024 – August 2024

- Designed custom mechanical parts using SolidWorks, FEA, design for manufacturing, to improve the effectiveness of Group14's silicon battery material manufacturing inspection processes.
- Increased sensor compatibility and inspection visibility by 90% with custom attachment plates.
- Led management of change process meetings & documentation for smooth project implementation.

Mechanical Engineering Intern | Raise Robotics May 2023 – August 2023

- Designed modular robotic gripper to reliably hold and position 5 lb aluminum brackets during automated construction tasks. Created design drawings and fabrication plans.
- Developed stability outrigger system for 1500 lb construction robot. Used dynamic simulation to determine optimal geometry and attachment structure for increased strength and stability.
- Modified and created robot assemblies with 700+ parts for URDF in CAD, improving model mates, geometries, and mass/material assignments for increased robot simulation accuracy.

Mechanical/Manufacturing Engineering Intern | Re:Build Manufacturing August 2022 – October 2022

- Designed and implemented fixtures and jigs for Pure Watercraft's electric outboard motor assembly line, improving assembly efficiency by reducing step complexity and improving ergonomics.
- Documented and developed high-fidelity work instructions for 20+ step assembly processes, creating 3D and 2D assembly drawings to improve efficiency and reduce assembly errors.

ACTIVITIES

Lead Powertrain Engineer | Surge Electric Motorcycles August 2024 – June 2025

- Led design, prototyping, manufacturing of powertrain for motorcycle electrification.
- Conducted motor & drive ratio selection, structural analysis, bracket design for ideal implementation.
